

# COUNTY OF LOS ANGELES

## CHIEF INFORMATION OFFICE

500 West Temple Street  
493 Kenneth Hahn Hall of Administration  
Los Angeles, CA 90012

JON W. FULLINWIDER  
CHIEF INFORMATION OFFICER

Telephone: (213) 974-2008  
Facsimile: (213) 633-4733

September 28, 2006

To: Mayor Michael D. Antonovich  
Supervisor Gloria Molina  
Supervisor Yvonne B. Burke  
Supervisor Zev Yaroslavy  
Supervisor Don Knabe

From: Jon W. Fullinwider  
Chief Information Officer

Subject: **RECOMMENDED APPROACH FOR ESTABLISHING A SINGLE  
CONSISTENT COUNTY DOMAIN NAME**

On August 29, 2006, the Board of Supervisors (Board) instructed the Chief Information Office (CIO) to keep the current e-mail address utilizing .org, develop a simple and consistent e-mail for all County e-mail addresses, and report back to the Board with a single consistent e-mail for all County e-mail addresses. This memo proposes an approach for implementing a single consistent e-mail domain for all County e-mail addresses and websites.

### Background

The Internet Domain Name System (DNS) allows users to refer to websites and online resources using domain names (such as [cao.lacounty.gov](http://cao.lacounty.gov)) which are easier to remember than an actual Internet Protocol address (i.e., 216.183.103.150). In the late 1980's, the Internet Corporation for Assigned Names and Numbers (ICANN) established generic top-level domain names (i.e., .com, .org, .gov., etc.). The purpose of which was to establish a formal degree of delineation between the types of Internet domain names assigned and their related industries/usages. This allowed businesses to be designated as .com (commercial), non-commercial businesses as .org (organization) and government entities as .gov. During the early years of Internet adoption, the .gov designation by local, state and federal agencies grew at a rapid rate causing concern that it was being over-used and even misused by businesses, private groups and others. This resulted in the Federal government (GSA) imposing a restriction on the use of .gov to federal agencies. Local government and state agencies that had previously been authorized to use the .gov designation were "grandfathered" allowing for its continued use, however, any new requests by non-federal agencies were denied.

While the rapid adoption of the Internet continued in the mid 1990's, further efforts were undertaken by Internet standards groups to establish a standard domain name designation structure for local governments (i.e., counties and cities). This resulted in the adoption of the County's domain name ([co.la.ca.us](http://co.la.ca.us)) which while cumbersome, achieved the objective of a common structure within the identified standard. Over the years, many departments found *co.la.ca.us* to be too cumbersome and not intuitive as to its significance and sought to obtain domain names more reflective of their business or service. This resulted in departments applying for and adopting domain names such as *lavotes*, *lasd*, *ladhs*, *lacounty*, *lacos*, etc. However, in attempting to obtain a more descriptive name, it was determined that it had already been assigned within the .xxx domain designation desired resulting in the adoption of other domain names such as *.org*, *.net*, *.info*, and even *.com*, all of which have unrestricted use. It is the uncontrolled adoption of domain names that exacerbates the 'branding' and use of the County's Internet services (see Attachment I).

## Approach

In March 2005, at a chance meeting in Washington DC., I met the individual from GSA who controls the use of the *.gov* designation for the federal government. In conversation, I asked why the restriction was imposed suggesting that it has caused many local government entities difficulty in branding their delivery of web services. I was surprised when told that given the uniqueness and size of Los Angeles County that I could request an exemption! The County had for several years attempted to seek approval for the use of the *.gov* designation and had always been told it was not available. Having made this contact within GSA, we immediately followed up and applied for an exemption. Within a few weeks, we were told we would be approved to use the *.gov* designation under the domain name of *lacounty.gov*. We were also told that this was the first time they had approved an exemption for a non-federal entity.

Upon receiving authorization to use the new designation, we briefed County department IT Managers and Department Heads about the domain designation and discussed the value it would have in helping standardize the branding of the County in its delivery of web services. There was strong support for this direction as it took the emotion out of departments' decision to have non-standard domain names. To minimize the impact to department operations, it was recommended that domain aliases be established allowing the old Internet/e-mail domain name to be used for an extended period or until the formal transition was complete within each department. This would allow both the old and new domain names to be used interchangeably.

To date, 21 departments have either transitioned to *lacounty.gov* or have established it as their e-mail domain alias, while the remaining departments are considering similar action. Adopting the *lacounty.gov* domain as the County standard has several advantages for our constituents and stakeholders:

- The *.gov* domain has become the recognizable Internet designation for US government entities, thereby making it more searchable and easier to remember.

- Its restricted use ensures that only County departments will be allowed to use the domain. Additionally, departments do not have to individually register their domain names since my office has the authority to designate and control the use of *lacounty.gov*.
- Using the same domain name for e-mail and websites promotes a single branding identity and a more coherent Internet presence for the County.

## Recommendation

The eGovernment Advisory Committee (eGAC) comprised of participants from 19 departments has worked with all departments to establish e-mail naming conventions and a process to deploy the use of the *lacounty.gov* domain name with minimal impact to their respective operations. Attachment II delineates departmental e-mail standards (the department identifier would precede the *lacounty.gov* domain designation) that were reviewed and agreed to by County departments. To facilitate the implementation of a consistent domain name for countywide e-mail and websites, the Office of the CIO, in concert with eGAC, will prepare a Board letter to recommend the following:

- Designate *lacounty.gov* as the County's standard domain name; and
- Direct the CIO to coordinate the implementation of the *lacounty.gov* domain name for all County e-mail and websites within six months while allowing departments to retain aliases as they transition to *lacounty.gov*.

If the Board desires to continue using the *lacbos.org* designation for its e-mail, the option to continue its use as an alias can certainly be sustained. However, several of the Board offices have already adopted *lacounty.gov* and it may be confusing that not all offices would have a similar standard.

If you have any questions, please contact me at (213) 974-2008 or Peter Loo, Associate CIO, at (213) 974-1725/[ploo@cio.lacounty.gov](mailto:ploo@cio.lacounty.gov).
